

MONSUN Clean Line Bucket Elevator

Lachenmeier Monsun has developed a series of machines especially designed for the animal feed industries of the future, where it is essential to minimize mixing of different materials. The series is called Clean Line.

The Clean Line bucket elevator for low speed vertical transport comes with a unique adjustable foot designed to minimize mixing of different materials. The bucket elevator is made for industrial use 24 hours every day of the year.

Facts:

- Capacity up to 150 tons/hour
- Standard elevator top
- Round shaped and adjustable elevator bottom
- The elevator belt is tensioned via 4 solid spindles.
- Sliding connection in the elevator trunk and inlet of the elevator.
- Closed belt pulley and scraper
- The inlet is placed in high position.
- Compressed air cleaning system

Benefits:

- Easy and fast adjustment of distance between elevator buckets and the round shaped elevator bottom.
- Reduced carry-over of product
- Material prevented to stick to and accumulate in the elevator bottom.
- Precise filling of elevator buckets at inlet - no spillage
- Effective compressed air cleaning system cleans out the round shaped elevator bottom at change-over of product.
- Dustproof design
